① ② <sup>also sections of the book that fit in the</sup> <em>Deep Wealth</em> by Chad S. Hamilton is classified as an investing/finance book; though there are subcategories within the book of psychology and sociology. The author describes financing in a way that <sup>goes beyond</sup> is outside of how someone can set up a finance plan, and explains how we approach money. He <sup>goes on to</sup> outline how different people approach money, and how our intrinsic values can effect how we handle money, and why sometimes <sup>just</sup> having education about finances does not help people get said finances in order.

① ② ③ <sup>that person</sup> The beginning of <em>Deep Wealth</em> is very interesting and insightful. The author provides information about various personality types and how his readers might fit into these personality types. He provides a self quiz and some gauges as to how to fit yourself into each category - and he outlines how <sup>a person's personality type</sup> this might effect how someone spends and invests money. The author is fond of using quips and quotes from <sup>previous</sup> authors/spiritualists/presidents to prove a point about how we feel about our money is so integral to who we are. The second part of the book helps educate on how to put together a plan to put away money for retirement, and how to invest in a productive fashion; and it is simple to understand, even for those who have no idea about finance in general. There are certain <sup>ideas</sup> things presented in this novel that some readers might disagree with, and the author doesn't spend much time addressing certain disadvantages that people are up against when dealing with finances in today's world - but the overall message of the book is positive and uplifting. It's recommended for people who <sup>just</sup> have an interest in getting a better purview on the finance world, or for folk who are more serious about starting their portfolios and investing for retirement.
